What's New in the?

The 'TajVideoMode' component is a class module for

DirectShow and is not included in the Microsoft Platform SDK (MPSDK). It defines all the properties and events required by DirectShow application developers. Interfaces:

- TjMainThreadFreeable This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjMainThreadWrapped This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjOwn This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjRawMonitor This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjScreen This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjScreenMode This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjVideo This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjVideoMode This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjVideoMode : IUnknown This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjVideoMode : ITjMainThreadFreeable This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjVideoMode : ITjOwn This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjVideoMode : ITjScreen This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- TjVideoMode : ITjScreenMode This interface is used to identify a component that can be safely freed from the main thread without causing an application crash. --
- Tj

System Requirements:

For the best quality, we recommend using a gaming laptop with a graphics card that supports V-Sync (NVIDIA or AMD). Need more horsepower? Consider upgrading your GPU to one of these: Need more memory? Consider upgrading your GPU to one of these: Many games will require you to increase your graphics resolution. We recommend any of these laptops with Intel's IGP built-in. Recommended for: AMD Radeon RX 560 or RX 570 AMD Ryzen 5 or 7
