Adobe Image Formats is now includes a new orientation identifier field. This can be used to tag images in storage, enabling easy access for other applications that support the Image Formats profile and have the TAG metadata inserted by Adobe Image Formats. To use this field, you simply tag an image as 'ORIENTATION.OCL-JP' or 'ORIENTATION.FLP'. There are a number of new shortcuts with the latest update. One of them is the rebleach shortcut button, which can be used to pick the same part of an image multiple times, or with different settings and so on. Another is the fixed axis buttons, which make it easy to conjure up fine tune adjustments. For example, turning the Y axis in once produces a tilt to the image like so: More recently, Adobe also added the jump ring tool to assist in selection modes. One feature that is not new is the

ability to use brush sizes larger than the defaults. Using the default settings can be clunky, especially when working with many layers. This feature is a major win, especially for 4K resolution content that requires these larger selections to be applied to. It's probably the feature that dooms Photoshop most to the competition. Another cool new feature is the ability to connect multiple external devices at once via Bluetooth. Photoshop CC 2017 already allows you to stream content to multiple devices. To help you get the most out of your connection, in Preferences, there is new option for streaming to multiple devices. Moving on from Adobe's Annual Released, Photoshop's May update brings new features in both Photoshop & Sketch. From Photoshop, you can now re-share folders and images via the web to help organize your collection and make managing it faster and easier. Also, there is now the ability to add metadata to slices, or sections of an image, to help organize and categorize your content. And in Sketch, you can add multiple shapes to one artwork, which is perfect for creating patterns. More recent updates to the Adobe cloud service will make it easy for you to pick up where you left off in between applications. Your work is always safe with the Adobe cloud, because your files are hosted safely in Adobe's S3 storage repositories, so there is no risk of data loss, and no more worrying about uploading files.
